The 15-Minute Week.

Seven days of real meals, none over fifteen minutes. You cook once a day — dinner. Every lunch is assembled cold and travels. This is one week of a thirty-day system.

The 15–Minute Week.

Seven days of real meals, none over fifteen minutes. You cook once a day — dinner. Every lunch is assembled cold and travels to work.

● Cook — under 15 min ● Assemble — no cooking ● Drink of the day

Your Week

Seven days, nothing over fifteen minutes

	BREAKFAST	LUNCH	DINNER
01	Greek Yogurt with Berries & Seeds	Tuna & White Bean Salad	Garlic Prawns with Wilted Spinach
02	Cottage Cheese & Avocado Toast	Chicken, Avocado & Seed Box	Miso Butter Beans with Greens
03	Cottage Cheese with Berries & Flaxseed	Mediterranean Tuna Bowl	Sea Bass with Broccoli & Lemon
04	Greek Yogurt with Walnuts & Honey	Tuna, Bean & Rocket Box	Mediterranean Baked Fish
05	Oat Porridge with Mixed Seeds	Chicken, Walnut & Kale Box	Chicken & Vegetable Stir–Fry
06	Savoury Scrambled Eggs with Spinach	Smoked Mackerel & Herb Plate	Beef & Broccoli with Sesame
07	Cinnamon Oats with Almond Butter	Turkey & Cucumber Roll–Ups	Egg & Broccoli Stir–Fry

This is one week of a thirty–day system. Every recipe here is pulled from one of the six protocols — GLP–1, Gut, Metabolic, Cognitive, Longevity and Hormonal. The full protocols carry 20 recipes each, a 30–day plan and a one–page cheat sheet. If the week works for you, the system is the same idea with the decisions already made.

OPTIMISATION WINDOW · DAYS 5–7

Garlic Prawns with Wilted Spinach

Lean protein — optimisation window

8 min COOK TIME	34g PROTEIN	2 SERVINGS	Low GASTRIC LOAD
---------------------------------------	-----------------------------------	----------------------------------	--

INGREDIENTS

- 300g raw prawns, peeled
- 200g baby spinach
- 3 garlic cloves, thinly sliced
- 1 tbsp olive oil
- 1/2 lemon, juiced
- Pinch chilli flakes
- Fresh parsley, chopped
- Sea salt & black pepper

GLP-1 Nutrition · Optimisation Window

METHOD

01

Heat the pan

Heat olive oil in a wide pan over medium–high heat until shimmering.

03

Wilt the spinach

Push prawns to one side. Add spinach to the pan and wilt for 1–2 minutes.

02

Cook the prawns

Add prawns and garlic. Cook 2–3 minutes per side until pink and just opaque.

04

Finish

Squeeze over lemon juice, scatter chilli flakes and parsley, and season to taste.

Prawns are close to pure protein with almost no fat, so they empty from the stomach faster than a fattier protein — useful when appetite is small and gastric emptying is already slowed. Thirty-four grams in a portion this size is unusually dense. Spinach adds volume and magnesium without adding gastric load.

PHASE 03 · DIVERSIFY & SUSTAIN

Miso Butter Beans with Greens

Fermented umami — rebuild phase

10 min COOK TIME	18g PROTEIN	2 SERVINGS	Live FERMENT
--	-----------------------------------	----------------------------------	------------------------------------

INGREDIENTS

- 2 x 400g tins butter beans, drained
- 200g kale or cavolo nero, stems removed
- 1 tbsp white miso paste
- 2 garlic cloves, sliced
- 1 tbsp olive oil
- 1 tsp lemon juice
- 2 tbsp warm water
- Black pepper

Gut Health · Phase 03 · Diversify & Sustain

METHOD

01
Cook the greens
Heat olive oil in a pan. Add garlic, cook 30 seconds, then add the kale and cook until wilted, 3–4 minutes.

03
Warm the beans
Add the butter beans to the pan with the greens and warm through, 2–3 minutes.

02
Make the dressing
Whisk the miso paste with warm water and lemon juice until smooth and pourable.

04
Finish
Remove from heat, stir through the miso dressing off the heat to protect the live culture, and season with black pepper.

Miso is a living ferment, and its bacteria are destroyed above roughly 60°C — which is why it goes in off the heat, not into the pan. Butter beans supply resistant starch that ferments in the colon into butyrate, the short-chain fatty acid your gut lining uses as fuel. Ferment plus substrate in a single bowl.

EVENING WINDOW · 5PM–9PM

Sea Bass with Broccoli & Lemon

Light protein — the circadian dinner

10 min COOK TIME	32g PROTEIN	2 SERVINGS	Light EVENING LOAD
--	-----------------------------------	----------------------------------	--

INGREDIENTS

- 2 sea bass fillets, approx 140g each
- 1 head broccoli, cut into florets
- 1 lemon, half sliced half juiced
- 1 tbsp olive oil
- 1 garlic clove, sliced
- Fresh parsley
- Sea salt & black pepper

Metabolic Health · Evening Window

METHOD

- 01

Steam the broccoli

Steam broccoli florets over boiling water 5 minutes until just tender but still bright green.
- 03

Build the sauce

In the same pan, add garlic and lemon juice, swirling for 30 seconds to make a light pan sauce.

- 02

Pan-sear the sea bass

Season the fillets. Heat olive oil in a pan and cook skin-side down 4–5 minutes, then flip for 1–2 minutes until just cooked through.
- 04

Plate and finish

Plate the broccoli, place the sea bass alongside, spoon over the sauce, and finish with parsley and lemon slices.

Insulin sensitivity falls as the evening progresses, so the last meal of the day should be the lightest and the least starchy. A lean white fish with a cruciferous vegetable delivers a full protein target with almost no glucose load — you finish the day satiated without asking your metabolism to clear a large carbohydrate dose overnight.

FUEL

Mediterranean Baked Fish

Omega-3 for a brain that lasts

15 min COOK TIME	30g PROTEIN	2 SERVINGS	DHA COGNITIVE TARGET
--	-----------------------------------	----------------------------------	--

INGREDIENTS

- 2 white fish fillets (cod or haddock), approx 150g each
- 1 cup cherry tomatoes, halved
- 1/4 cup kalamata olives, pitted
- 2 tbsp capers
- 2 garlic cloves, sliced
- 2 tbsp olive oil
- Fresh oregano
- Sea salt & black pepper

Cognitive Performance · Fuel

METHOD

- 01
- Preheat and prep**

Preheat the oven to 200°C. Lay the fish fillets in a baking dish.
- 03
- Bake**

Bake for 12–14 minutes until the fish flakes easily and the tomatoes have softened.

- 02
- Build the topping**

Scatter the tomatoes, olives, capers, and garlic over and around the fish. Drizzle with olive oil.
- 04
- Finish**

Season with salt and pepper, scatter over fresh oregano, and serve with the pan juices spooned on top.

Oily and white fish both supply DHA, the omega-3 fatty acid that makes up a significant share of the brain's structural fat and supports the signalling between neurons. Regular intake is one of the more consistently supported dietary factors in long-term cognitive health.

SARCOPENIA PREVENTION

Chicken & Vegetable Stir-Fry

Fast protein, maximum vegetables

12 min COOK TIME	46g PROTEIN	3 SERVINGS	High PROTEIN DENSITY
--	-----------------------------------	----------------------------------	--

INGREDIENTS

- 400g chicken breast, sliced thin
- 1 head broccoli, small florets
- 1 red pepper, sliced
- 150g mangetout
- 2 garlic cloves, minced
- 1 tbsp fresh ginger, grated
- 2 tbsp soy sauce or tamari
- 1 tbsp sesame oil
- 1 tsp olive oil
- 1 tbsp sesame seeds

Longevity & Healthspan · Sarcopenia Prevention

METHOD

- 01

Get the pan hot
Heat olive oil in a wok or wide pan over high heat until it just begins to smoke. A cool pan steams instead of searing.
- 03

Cook the vegetables
Add broccoli, pepper and mangetout with a splash of water. Stir-fry 3 minutes until bright and crisp-tender.

- 02

Sear the chicken
Add chicken in a single layer. Leave undisturbed 90 seconds, then stir-fry 2 minutes until cooked through. Remove.
- 04

Combine
Return chicken with garlic, ginger, soy and sesame oil. Toss 1 minute. Scatter sesame seeds.

Muscle is the organ of longevity — it governs glucose disposal, metabolic rate and, ultimately, whether you stay independent. Forty-six grams of complete protein in one serving is what actually drives muscle protein synthesis, while the fast, high-heat cooking keeps the vegetables' heat-sensitive compounds largely intact.

SEX HORMONES

Beef & Broccoli with Sesame

Zinc and protein — the hormone building blocks

12 min COOK TIME	38g PROTEIN	2 SERVINGS	Zinc & Protein HORMONAL TARGET
--	-----------------------------------	----------------------------------	--

INGREDIENTS

- 300g lean beef steak, thinly sliced
- 1 large head broccoli, cut into florets
- 2 garlic cloves, minced
- 1 tbsp fresh ginger, grated
- 2 tbsp soy sauce or tamari
- 1 tbsp sesame oil
- 1 tbsp toasted sesame seeds
- 1 tsp olive oil
- Sea salt & black pepper

Hormonal Health · Sex Hormones

METHOD

01

Sear the beef

Heat olive oil in a wide pan over high heat. Add beef in a single layer and sear 1–2 minutes until browned. Remove and set aside.

03

Build the sauce

Add garlic and ginger. Cook 30 seconds until fragrant. Pour in soy sauce and sesame oil, tossing to coat.

02

Cook the broccoli

Add broccoli to the same pan with a splash of water. Cover and steam 3–4 minutes until bright green and just tender.

04

Finish

Return beef to the pan and toss for 1 minute. Remove from heat, scatter sesame seeds and serve immediately.

Red meat is the most bioavailable source of zinc in the diet, and zinc is a rate-limiting cofactor in testosterone production — deficiency measurably lowers output. Broccoli adds indole-3-carbinol, which supports the liver pathway that clears used oestrogen. The raw material and the machinery on one plate.

REPAIR

Egg & Broccoli Stir-Fry

Sulforaphane and the brain's master antioxidant pathway

15 min COOK TIME	20g PROTEIN	1 SERVINGS	Nrf2 COGNITIVE TARGET
--	-----------------------------------	----------------------------------	---

INGREDIENTS

- 3 large eggs
- 200g broccoli florets
- 1 tbsp sesame oil
- 1 tbsp oyster sauce
- 1 garlic clove, minced
- 1 spring onion, sliced
- Sesame seeds, to finish

Cognitive Performance · Repair

METHOD

01

Blanch broccoli

Blanch broccoli in boiling water 2 minutes. Drain well.

03

Scramble the eggs

Push broccoli to the side. Crack eggs into the cleared space. Scramble gently until just set.

02

Stir-fry

Heat sesame oil in a wok over high heat. Add garlic, stir 30 seconds. Add broccoli, stir-fry 2 minutes.

04

Toss and finish

Toss everything together with oyster sauce. Finish with spring onion and sesame seeds.

Broccoli contains sulforaphane — a compound that crosses the blood-brain barrier and activates Nrf2, the master antioxidant pathway that directly protects neurons from oxidative damage. Lightly blanching before stir-frying preserves more sulforaphane than prolonged high-heat cooking alone.

COFFEE · ICED · OAT MILK

Banana Bread Latte

Slow-curve sweetness — pairs with Metabolic Health

5 min PREP TIME	8g PROTEIN	1 SERVING	Low GLYCEMIC
---------------------------------------	----------------------------------	---------------------------------	------------------------------------

INGREDIENTS

- 1 shot espresso, cooled
- 150ml oat milk
- 1/2 ripe banana, frozen
- 1/4 tsp cinnamon
- 1 tsp almond butter
- Pinch of sea salt
- Ice

Coffee · Iced · Oat Milk

METHOD

01

Blend the base

Blend the frozen banana, almond butter, cinnamon and salt with 50ml of the oat milk until completely smooth.

03

Add the milk

Top with the remaining oat milk.

02

Build the glass

Fill a tall glass with ice and pour the banana base over.

04

Layer and serve

Pour the espresso over the back of a spoon so it sits on top rather than sinking through, then stir just before drinking.

Caramelised banana carries the sweetness a syrup would normally have to — the frozen fruit does the work, with nothing added. Oat milk, cinnamon and the fat in the almond butter flatten the glucose curve behind it, so the sweetness arrives slowly instead of all at once. It drinks like dessert and behaves like breakfast.

TEA · ICED · METABOLIC

Iced Green Tea & Mint

Drink it with the meal, not after it — pairs with Metabolic Health

5 min PREP TIME	0g PROTEIN	1 SERVING	High CATECHIN
---------------------------------------	----------------------------------	---------------------------------	-------------------------------------

INGREDIENTS

- 2 green tea bags (sencha)
- 300ml hot water (80°C)
- Large handful of fresh mint
- Squeeze of lemon
- Ice

Tea · Iced · Metabolic

METHOD

01 Steep short
Steep the green tea at 80°C for two minutes — no longer, or it turns bitter and undrinkable.

03 Chill through
Chill completely before it touches ice, or it will dilute.

02 Infuse the mint
Add the mint and let it infuse as the tea cools naturally.

04 Serve
Pour over a full glass of ice and finish with lemon.

Green tea catechins have modest but real evidence behind them for glucose handling, and the timing is what unlocks it: drink this alongside a carbohydrate-heavy meal, not an hour afterwards. The mint is there because green tea alone is a hard sell every day, and the drink you actually finish is the one that works.

TEA · WARM · CAFFEINE-FREE

Chamomile & Cacao Evening Tea

Wind down without a sedative — pairs with Hormonal Health

7 min PREP TIME	1g PROTEIN	1 SERVING	Caffeine-Free BASE
---------------------------------------	----------------------------------	---------------------------------	--

INGREDIENTS

- 1 chamomile tea bag
- 1 tsp dried lavender
- 200ml hot water
- 1 tsp raw cacao powder
- 1 tsp raw honey

Tea · Warm · Caffeine-Free

METHOD

- 01

Steep long

Steep the chamomile and lavender in hot water for a full 5 minutes, covered, to keep the volatile oils in the cup rather than the air.
- 03

Combine

Pour the remaining tea through a strainer into the mug, whisking as you go.

- 02

Make a cacao paste

Put the cacao in your mug with 2 tbsp of the hot tea and whisk smooth before adding the rest.
- 04

Sweeten last

Stir in honey. Drink about an hour before bed.

Chamomile contains apigenin, which binds to the same receptors targeted by mild sedatives — the effect is real but gentle, and it builds with regular use rather than hitting on the first cup. Raw cacao adds polyphenols with only trace caffeine, so it deepens the drink without costing you the sleep you are trying to protect.
